After a serious injury, illness, or surgery, you may recover slowly. You may need to regain your strength, relearn skills, or find new ways of doing things you did before. This process is called Rehabilitation. Rehabilitation often focuses on:

- Physical Therapy to help your strength, mobility, and fitness
- Occupational Therapy to help with your daily activities.
- Speech-Language Therapy to help with speaking, understanding, reading, writing, and swallowing.
- Treatment of Pain

The type of therapy and goals of therapy may be different for different people. An older person who has had a stroke may simply want rehabilitation to be able to dress or bathe without help. A younger person who has had a heart attack may go through cardiac rehabilitation to try to return to work and normal activities. Someone with a lung disease may get pulmonary rehabilitation to be able to breathe better and improve their quality of life.

At Campbellsville Nursing & Rehabilitation Center we offer all of the above services and more. We pride ourselves on providing the best rehabilitation services in the community.
